# Preface

This document contains the text of OASYS Global messages in the MT511 format. The order of the messages presented illustrates a possible exchange that could occur between a broker and an institution conducting an allocation and confirmation on a block trade consisting of two allocations.

The examples illustrate proper use of the MT511 message format for a hypothetical trade scenario. The examples are intended to be typical in nature, illustrating several key capabilities of the MT511 format. They do not cover all of the features and capabilities of the MT511 format.

## Intended Audience

This document is directed toward your systems analysts, and programmers, and others involved in implementing the link between your internal systems and OGD.

## How This Manual Is Organized

This manual contains the following chapters and appendices:

- Chapter 1, “Introduction,” illustrates the OASYS Global system architecture, introduces the message flow examples in subsequent chapters, and explains how to read the message flow samples.
- Chapter 2, “Trade Message Samples,” includes trade message samples.
- Chapter 3, “Allocation Message Samples,” includes allocation message samples.
- Chapter 4, “Confirmation Message Samples,” includes confirmation message samples.
- Chapter 5, “Contract Message Samples,” includes contract message samples.

## Typographic Conventions

Unless otherwise noted in the text, this manual uses the following typographic conventions:

Monospace	Commands, printed text examples, function names and parameters, constants, variables, field names, literal values, return values, arguments, transaction names, configuration parameters, default values, format strings, MT511 tags and assigned values, path variables and paths, and C code samples; for example:  OASYS LOG REPORT
<b>Monospace Bold</b>	Data format specifications. For example, <b>dd-mm-yy</b> date format.
UPPERCASE	Electronic Trade Confirmation acronyms (such as ETC and API), and message types (such as BLIM).
<i>Italics</i>	Trade and message statuses (for example <i>Reject</i> , <i>Affirm</i> , <i>Cancel</i> ).
<i>UPPERCASE ITALICS</i>	MT511 message types (for example, <i>AE</i> , <i>CN</i> ( <i>CNA CNB</i> ), and <i>TA</i> ), and return codes (for example, <i>SUCCESS</i> , <i>FAILURE</i> ).
<b>Bold</b>	File names (such as <b>import.dat</b> and <b>trans.map</b> ), and library names (such as <b>wsock32.dll</b> and <b>moa.lib</b> ).

## Thomson Financial ESG

Thomson Financial ESG is the worldwide leader in providing technology-based workflow solutions to the global investment community. Thomson Financial ESG is committed to partnering with its clients to dramatically reduce the risk and cost of processing trades, and thereby improving their investment performance. Thomson Financial ESG services are used in 37 countries for domestic and cross-border trading. Thomson Financial ESG supports approximately 3,450 clients from 18 offices located in major financial centers across the globe.

Thomson Financial ESG is part of Thomson Financial (TF), a leading provider of information services and work solutions to the worldwide financial community. TF employs more than 7,000 people in more than 40 locations dedicated to the success of our clients and is part of The Thomson Corporation (TTC). With annual revenues approaching US\$6 billion, TTC is one of the world's leading information and publishing companies. TTC's common shares are traded on the Toronto, Montreal and London stock exchanges

Thomson Financial ESG's products and services include ALERT<sup>®</sup>, ALERTDirect<sup>™</sup>, OASYS Global<sup>™</sup>, OASYS Global Direct<sup>™</sup>, OASYS<sup>™</sup>, OASYS Direct<sup>™</sup>, MarketMatch<sup>™</sup>, Thomson Report<sup>™</sup>, and AutoMatch<sup>™</sup>.

## Sales Executives

Call your sales executives to learn more about other Thomson Financial ESG services that can automate your post-trade operations, including ALERT<sup>®</sup>, ALERTDirect<sup>™</sup>, AutoMatch<sup>™</sup>, OASYS Global<sup>™</sup>, OASYS Global Direct<sup>™</sup>, OASYS<sup>™</sup>, OASYS Direct<sup>™</sup>, MarketMatch<sup>™</sup>, and Thomson Report<sup>™</sup>. For assistance call the following sales offices.

## Electronic Trade Confirmation Code of Practice

See the "Electronic Trade Confirmation Code of Practice" section in *OASYS Global Direct Overview* for more information about the Electronic Trade Confirmation Code of Practice.

# 1: Introduction

1

Introduction

This chapter illustrates the OASYS Global system architecture, introduces the message flow examples in subsequent chapters, and explains how to read the message flow samples. It contains the following sections:

Item	Page
<i>How the System Works</i>	2
<i>Message Flow Samples</i>	3
<i>How to Read the Message Flow Samples</i>	4

## How the System Works

The following diagram shows the various trade party connections to the Thomson ESG OASYS Global network.

**Figure 1.1**

The left side of the diagram shows the existing OASYS Global system. Clients use OASYS Global workstations to enter data that then travels over modems and dial-in lines through the Thomson Financial Network (TFNNet) to communication servers at Thomson ESG. The OASYS Global host processes the incoming messages and forwards them by the communication servers to other OASYS Global workstations.

The right side of the diagram shows the OASYS Global *Direct* system. Here, your host computer formats trade messages in the OASYS Global MT511 format. These messages travel via leased lines through the Thomson ESG MDS to the OASYS Global host. From there, the host then routes them to other trade parties using either OASYS Global workstations or OASYS Global *Direct*. Similarly, trade messages sent from an OASYS Global workstation pass through the host and the MDS to client hosts.

# Message Flow Samples

The following chapters provide samples of OASYS Global *Direct* message flow. The message flow samples cover trade, allocation, and contract.

In a typical situation, with a limited number of allocations, the institutional client enters all allocations before the first contract. However, the broker client may see contract messages intermingled with allocations, especially if your counterparty generates a large number of allocations.

**Note!** The Sub Message Type Function Version (12A) field is shown in all sample messages, always having the value 01. The field is optional for clients sending messages, but will always appear in messages received from the host. We recommend that clients always insert the field, for future compatibility.

Some of the key MT511 features illustrated by the examples are:

- **Fundamental Data** — The examples illustrate how trade, allocation, and contract messages represent the fundamental data of a transaction, such as security, price, quantity, commissions, etc.
- **Allocation and Confirmation** — The examples illustrate how the system creates allocations and links them to the original block. The samples also depict the conversion of the allocations (*TA* messages) to contracts (*CN* messages).
- **Value Added Data** — The example shows the addition of data from the OASYS Global Securities Cross Reference and ALERT Delivery Instructions to the trade message. This occurs both in the *ValueAdded* message and the enhanced message, constructed at the host, combining the original client message with the *ValueAdded* data. The particular sample here uses the block (*AE*) message.
- **Reference Numbers** — The samples illustrate client reference number use, the common reference number generation at the host, and its addition to the enhanced *AE* and *TA* messages.
- **Valid Response** — The samples show mandatory use of *Valid* responses. It is important to respond immediately, as shown by the small increment in the *Time of Day* field from the original message to the *Valid* response.
- **Reject** — A reject scenario, this illustrates the use of the comment field and *Reject* status. It also depicts the use of the corresponding *Amend* message created to fix the problem that prompted the reject.

A typical MT511 line is in this format:

```
:tag:value<cr>lf
```

For example:

```
:32M:GBP124080,00<cr>lf
```

## *Introduction*

# How to Read the Message Flow Samples

Read the data samples from beginning to end. The use of some data fields, especially header type fields, is similar across all messages or various subsets of all messages. The system uses the field comments to the right on field introduction or when it uses the field in a different way.

## 2: Trade Message Samples

2

This chapter includes trade message samples. It contains the following sections:

Item	Page
<i>AE New, Broker to Host</i>	6
<i>AE ValueAdded, Host to Broker</i>	7
<i>AE Enhanced, Host to Institution</i>	8
<i>AE Valid Response, Institution to Broker</i>	10

The first message for a Block Trade is known as the *AE* (Advice of Execution) message and it is the initial trade message sent by the Broker to his counterparty. The OASYS Global Host generates the Value Add message and forwards it to the Broker with ALERT delivery instructions, security cross-reference codes and the OASYS common reference number (CRN). The institution's system, or the host on behalf of a workstation based institution, sends the *Valid* message to confirm the receipt of the *AE* message.

This section also contains another message, the enhanced *AE*. This message is not a different type of message; it is an *AE* with additional amplifying data. The system constructs it at the OASYS Global host. It contains the original *AE* message that the broker generated, the same security cross reference and ALERT delivery instruction data sent in the *ValueAdded* message, and a common reference number that the OASYS Global host created.

## AE New, Broker to Host

This is the original trade message. The broker creates it and sends it to the institution.

Table 2-1

:TFH9:OG01	Tag and value are required for all MT511 messages
:TFH1:511	Same as above
:TFH2:AE	Tag and value required for all block level messages
:TFH3:CN	Tag and value are required for all MT511 messages
:23A:AE	Tag and value required for all AE messages
:23B:01	Indicates New messages
:12A:01	Optional but recommended -- always 01
:80a1:TESTBROK	The sender's Thomson-assigned acronym. Used also for 80J
:80a3:TESTINSB	The receiver's Thomson-assigned acronym. Used also for 80J
:TF12:20001002	Message sent date

:23K:IMGR	Indicates party group info for Institution
:80J:TESTINSB	Institution's Thomson-assigned acronym.
:32M:GBP124080,00	Deal Amount in English pounds
:72>Please note that this message is fo	Broker's comment
r demonstration only, and is not a	Continuation of field 72
n actual trade	Continuation of field 72

## AE ValueAdded, Host to Broker

The OASYS Global host generates this message to send the ALERT delivery instructions and ISIN code to the original broker. It also contains the OASYS Global common reference number (20B).

# AE Enhanced, Host to Institution

This is the original message from the broker, with the value added message data including the common reference number, BDIs, and security identifiers. The OASYS Global host forwards this message to the institution.

## AE Valid Response, Institution to Broker

The institution builds this message immediately upon the receipt and safe storage of the broker's *AE* message. The institution's client application should generate *Valid* responses messages upon receipt of corresponding *New* and *Amend* messages and *Canceled* response to a *Cancel* message.

## 3: Allocation Message Samples

This chapter allocation message samples. It contains the following sections:

Item	Page
<i>First Allocation, Institution to Host</i>	12
<i>First Allocation ValueAdded, Host to Institution</i>	13
<i>Enhanced First Allocation, Host to Broker — Common Reference Added</i>	14
<i>First Allocation Valid Response, Broker to Institution</i>	15
<i>Second Allocation, Institution to Host</i>	16
<i>Second Allocation ValueAdded, Host to Institution</i>	17
<i>Enhanced Second Allocation, Host to Broker — Common Reference Added</i>	18
<i>Second Allocation Valid Response, Broker to Institution</i>	19
<i>Third Allocation, Manual Delivery, Institution to Host</i>	20
<i>Third Allocation ValueAdded, Manual Delivery, Host to Institution</i>	21
<i>Enhanced Third Allocation, Manual Delivery, Host to Broker — Common Reference Added</i>	22
<i>Third Allocation Valid Response, Manual Delivery, Broker to Institution</i>	23

In this example, an institution has two allocations on the trade. Note that:

1. The 20A/20B/20C fields link the allocation to the trade.
2. The TF14 field has the institutions internal reference for each allocation. You need this to cross reference the response message and to capture the common reference number for further activity on the allocation and contract.
3. The 32M field only carries settlement currency and always contains a zero quantity in the Amount subfield.

## First Allocation, Institution to Host

The institution allocates 7000 shares to CONTRAFUND. The *TA* begins with the same Transaction Version Number (20C) and Sub Message Type Function (23B) as the *AE* on which it is based. If the *AE* is an *Amend* (23B=02), then the corresponding *TA* has the 23B=01.

Table 3-1

:TFH9:OG01

## 4: Confirmation Message Samples

This chapter includes confirmation message samples. It contains the following sections:

Item	Page
<i>First Allocation Contract Note, Broker to Institution</i>	26
<i>First Allocation Contract Note, Valid Response, Institution to Broker</i>	27
<i>First Allocation Contract Note, Affirm Response, Institution to Broker</i>	28
<i>Second Allocation Contract Note, Broker to Institution</i>	29
<i>Second Allocation Contract Note, Valid Response, Institution to Broker</i>	30
<i>Second Allocation Contract Note, Reject Response, Institution to Broker</i>	31
<i>Second Allocation Contract Note Amend, Broker to Institution</i>	32
<i>Second Allocation Contract Note Amend, Valid Response, Institution to Broker</i>	33
<i>Second Allocation Contract Note Amend, Affirm Response, Institution to Broker</i>	34

As in the workstation-based OASYS Global, the allocations are the basis for the contracts. The Contract Note (CNB) uses the same common reference number as its corresponding allocation. Common Reference is a required field for all CNB messages used in block trading.

:23K:IMGR	
:80J:TESTINSB	
:23K:EXEC	
:80J:TESTBROK	

## Second Allocation Contract Note Amend, Broker to Institution

To fix the problem that caused the rejection, the broker sends an amended *CN* note. The differences between an *AMEND* and a *NEW* are:

1. For an *AMEND*, 23B=02, for a *NEW* message, 23B=01
2. For an *AMEND*, 20C must be one greater than the previous message; for a *NEW* message, 20C is always 1.

## 5: Contract Message Samples

5

This chapter includes contract message samples. It contains the following sections:

Item	Page
<i>CNA New, Broker to Host</i>	36
<i>CNA ValueAdded, Host to Broker</i>	37
<i>CNA Valid Response, Institution to Broker</i>	38
<i>CNA Enhanced, Host to Institution</i>	39

The first message for a contract trade is always the initial trade message sent by the broker, known as the *CNA* (Contract Note) message. The messages that follow are the *ValueAdded* message and the *Valid* message. The system creates the *ValueAdded* message at the OASYS Global host and sends it back to the broker with ALERT delivery instructions, additional securities codes, and the OASYS Global common reference number. The institution's system, or the host on behalf of a workstation based institution, sends the *Valid* message to confirm the receipt of the *CNA* message.

This section also contains another message, the enhanced *CNA*. This message is not a different type of message; it is a *CNA* with additional amplifying data. The system constructs it at the OASYS Global host. It contains the original *CNA* message that the broker generated, the same security cross reference and ALERT delivery instruction data sent in the *ValueAdded* message, and a common reference number that the OASYS Global host created.
